

File Copy

Write a c++ file copy program.

1. Use taz for this assignment.
2. Create filecopy.cpp in your home/comp170 directory.
3. Use command line arguments for the “from” and “to” filenames respectively.
4. Be sure the “from” file exists. If not, display an error message and do not create the output file.
5. If the “to” file already exists ask the user if they are sure they want to overwrite it. If the user answers yes overwrite it, otherwise do nothing.
6. This program should work for both text and binary files.
