

First Python Assignment

To be completed on Taz.harding.edu in a directory named python in your home directory. Name the file area.py

Goal: To get familiar with writing a simple python program and testing it to make sure it functions.

Details:

- First, ask the user if they want to “Find the area of a rectangle or circle?”. The user should enter a text response (“circle” or “rectangle”).
- If the user selects circle ask them for the radius of the circle then display its area.
- If the user selects rectangle ask them for the width and the height and display its area.

When you complete the python program simply upload a text file to easel to let me know to check your program on taz. The text file should contain a message like “My python work is read to be graded now”.

NOTE: Use raw_input to get a string from the user.
