

### Letter Grades from Number Grades

Write a C++ program that will receive as input a number grade and display the corresponding letter grade.

The goal of this assignment is to give the student practice with if-else and if-else-if structures.

Example with an age:

```
if (age < 1)
{
    cout << "Infant" << endl;
}
else if (age < 3)
{
    cout << "Toddler" << endl;
}
else if (age < 13)
{
    cout << "Child" << endl;
}
else if (age < 20)
{
    cout << "Teen" << endl;
}
else if (age < 65)
{
    cout << "Adult" << endl;
}
else
{
    cout << "Senior" << endl;
}
```
