

Comp 170
Attendance Recorder
Due 11-19-2004
30 points

The goal of this assignment is to save to a file the names of the students whose student id cards are swiped. The names should be stored in one of two formats:

First_Name Last_Name
Or
Middle_Name Last_Name

- When the program starts it should prompt the user for a file name to save the results in.
- The program should then read in one student's card information at a time and write out the student's name as instructed above to the open file.
- The program should display "Enter Student (or Quit) " each time it is waiting for a student to be entered.
- The program should exit when "quit" is entered. The comparison with "quit" should be case insensitive.
- When a student's name is entered directly, without the use of a student id, it should be saved directly to the file.
 - You can tell if the input did not come from the card by how it is formatted.
