

## Valid Date Flowchart and C++ Program

### Goals

Algorithm development practice with flowcharts

C++ input/output practice

C++ conditional statement practice

### Task 1

Using overflow create a flow chart that tells the user if a given date is valid or not. The flowchart should the user for three numbers (year, month and day). The flowchart should determine if the date is valid then display the date in year/month/day format then either “ is a valid date.” or “ is NOT a valid date.”

### Task 2

Implement the flowchart created for this exercise in C++.

Files to submit:

1. ValidDate.flx (from task 1)
2. ValidDate.cpp (from task 2)
